

1 WAKE IT UP

Tap the screen to wake it up.

If it looks off... it's just sleeping.

Morning, thermostat!

2 SET TEMPERATURE

Use ▲ ▼ to adjust temperature.

Recommended:

72-74°F

(Florida comfort zone)

3 MODES (IMPORTANT)

Make sure it's set to:

COOL
(most of the time)

HEAT
(rarely needed... this is Florida)

4 FAN SETTINGS

Fan should stay on AUTO.

Not "ON" (unless you like a wind tunnel).

Auto = just right!

5 BE PATIENT

AC takes time to cool the house.

Lowering it to 60° won't make it faster.

Good things (and cool houses) take time.

It's AC... not magic.

6 DOORS & WINDOWS

Keep doors and windows closed while AC is running.

Helps it stay cool and efficient.

7 DON'T GO EXTREME

Please keep temp between:

70-76°F

Why? It helps protect the system (and keeps everyone comfy).

Extreme temps = stressed out fish!

8 RELAX & ENJOY

Sit back, cool off, and enjoy your stay!

Perfect temp for sunset watching.

IMPORTANT REMINDERS

KEEP IT IN COOL MODE

That's the mode we use most in Florida.

DON'T SET BELOW 70°F

It won't cool faster and can cause issues.

KEEP DOORS & WINDOWS CLOSED

Helps keep the cool air in and the hot air out.

LEAVE FAN ON AUTO

It runs when needed and saves energy.

QUESTIONS?

If you have any issues, message us anytime—we're happy to help!

THANK YOU!

We appreciate you treating our home like your own.

Relax. Recharge. You're at Red Fish Retreat!
